- Stative vs. Non-stative
- States -Conceived of as not changing over time, as well as extended in time and permanent.

◆□ > ◆□ > ◆ Ξ > ◆ Ξ > → Ξ → の Q () -

- Stative vs. Non-stative
- States -Conceived of as not changing over time, as well as extended in time and permanent.
  - (5) a. John is tall.
    - b. Mary knows the answer.
    - c. It is 8:00 p.m.
    - d. ! John is being tall.

◆□ → ◆□ → ◆三 → ◆三 → ○ へ ○ ·

- Stative vs. Non-stative
- States -Conceived of as not changing over time, as well as extended in time and permanent.
  - (7) a. John is tall.
    - b. Mary knows the answer.
    - c. It is 8:00 p.m.
    - d. ! John is being tall.

Generally only compatible with simple present, but notice extended use of progressive and subtle meaning differences:

- Stative vs. Non-stative
- States -Conceived of as not changing over time, as well as extended in time and permanent.
  - (9) a. John is tall.
    - b. Mary knows the answer.
    - c. It is 8:00 p.m.
    - d. ! John is being tall.

Generally only compatible with simple present, but notice extended use of progressive and subtle meaning differences:

(10) . a. The statue stands in the square.

b. The statue is standing in the square.

Structural vs. Phenomenal distinction – Goldsmith and Woisetschlager (1979)

#### Temporary vs. permanent states

As seen with the English progressive marking before, states are not always permanent. Other languages also mark these differences (but not always for the same concepts).

#### Temporary vs. permanent states

As seen with the English progressive marking before, states are not always permanent. Other languages also mark these differences (but not always for the same concepts).

- Spanish ser vs. estar
  - (12) a. Soy enfermo (I am a sickly person)b. Estoy enfermo (if I have a cold)

DITL

#### Processes

 Involve change and are extended in time. In present tense they need to be used in the progressive (unless habitual)

◆□ > ◆□ > ◆臣 > ◆臣 > 善臣 のへで

#### Processes

- Involve change and are extended in time. In present tense they need to be used in the progressive (unless habitual)
- (15) . a. John ran a mile in under four minutes.
  - b. Sheila wrote three letters in an hour.
  - c. !John ran a mile for six minutes.
  - d. !Sheila ate an apple for ten minutes.

◆□ > ◆□ > ◆臣 > ◆臣 > 善臣 のへで

#### Processes

 Involve change and are extended in time. In present tense they need to be used in the progressive (unless habitual)

#### (17) . a. John ran a mile in under four minutes.

- b. Sheila wrote three letters in an hour.
- c. !John ran a mile for six minutes.
- d. !Sheila ate an apple for ten minutes.
- (18) a. John ran for twenty minutes.
  - b. Sheila ate apples for two days straight.
  - c. !John ran in twenty minutes.
  - d. !Sheila ate apples in two days.

# Distinguishing Processes from Transitions

 Activities: Atelic i.e. have no natural endpoint or goal (e.g. *I'm running in the park*) Compatible with a durative adverbial (e.g. *for*) that profiles the amount of time the activity takes.

◆□ > ◆□ > ◆臣 > ◆臣 > ○ 臣 ○ の Q @

# Distinguishing Processes from Transitions

- Activities: Atelic i.e. have no natural endpoint or goal (e.g. *I'm running in the park*) Compatible with a durative adverbial (e.g. *for*) that profiles the amount of time the activity takes.
- Accomplishments: Telic i.e. have a natural endpoint of goal (e.g. *I'm running a mile*) Compatible with a container adverbial (e.g. *in*) that profiles the amount of time taken to reach the desired goal.

# **Typological Effects**

Some languages are more systematic than English in distinguishing indicators of actual and potential terminal points. Thus Swedish use different prepositions:

◆□ > ◆□ > ◆臣 > ◆臣 > ○ 臣 ○ の Q @

# **Typological Effects**

Some languages are more systematic than English in distinguishing indicators of actual and potential terminal points. Thus Swedish use different prepositions:

- (21) Jeg reser till Frankrike på två månader.I('m) going to France for two months.
- (22) Jeg reste i Frankrike *i* två månader. I traveled in France for two months.

◆□ > ◆□ > ◆臣 > ◆臣 > ○ 臣 ○ の Q @

Achievements: Events that are conceived of as instantaneous. Often, however, there is an underlying activity that causes a change of state. Their point-like nature tends to require them to be described in the past tense or narrative present.

◆□ > ◆□ > ◆臣 > ◆臣 > ○ 臣 ○ の Q @

Achievements: Events that are conceived of as instantaneous. Often, however, there is an underlying activity that causes a change of state. Their point-like nature tends to require them to be described in the past tense or narrative present.

- (24) a. John shattered the window.
  - b. ! John shatters/is shattering the window.
  - c. The canals froze.
  - d. Mary found her keys.
  - e. \*Mary is finding her keys.
  - f. John reached the top.

◆□ → ◆□ → ◆三 → ◆三 → ◆ ● ◆ ◆ ● ◆

Points: Similar to achievements in being conceived as instantaneous, but without the underlying run-up activity that characterizes gradual achievements

◆□ > ◆□ > ◆臣 > ◆臣 > ○ 臣 ○ の Q @

Points: Similar to achievements in being conceived as instantaneous, but without the underlying run-up activity that characterizes gradual achievements

- (26) a. Bill coughed.
  - b. The light flashed.
  - c. Bill is coughing.
  - d. The light is flashing.

DITL

◆□ > ◆□ > ◆臣 > ◆臣 > ○ 臣 ○ の Q @

Points: Similar to achievements in being conceived as instantaneous, but without the underlying run-up activity that characterizes gradual achievements

- (27) a. Bill coughed.
  - b. The light flashed.
  - c. Bill is coughing.
  - d. The light is flashing.

(c) and (d) have an iterative interpretation. Compare with the gradual achievements *John is reaching the top* or *The canals are freezing*.

**STATE**: John loves his mother.

▲□▶ ▲□▶ ▲目▶ ▲目▶ 三目 - のへ(?)

- **STATE**: John loves his mother.
- ACTIVITY: Mary played in the park for an hour.

◆□ ▶ ◆□ ▶ ◆臣 ▶ ◆臣 ▶ ○臣 ○ のへで

- **STATE:** John loves his mother.
- ACTIVITY: Mary played in the park for an hour.
- ACCOMPLISHMENT: Mary wrote a novel.

◆□ > ◆□ > ◆臣 > ◆臣 > ○ 臣 ○ の Q @

- **STATE:** John loves his mother.
- ACTIVITY: Mary played in the park for an hour.
- ACCOMPLISHMENT: Mary wrote a novel.
- ACHIEVEMENT: John found a Euro on the floor.

- **STATE:** John loves his mother.
- ACTIVITY: Mary played in the park for an hour.
- ACCOMPLISHMENT: Mary wrote a novel.
- ACHIEVEMENT: John found a Euro on the floor.
- **POINT**: John knocked on the door (for 2 minutes).

# Bach Eventuality Typology (Bach, 1986)

# Event Transition Graph (Moens and Steedman 1988)

Pustejovsky

#### Incremental Theme Verbs

 Certain NP's measure out the event. They are direct objects consumed or created in increments over time (cf. *eat an apple* vs. *push a chart*) (Tenny 1994).

### Incremental Theme Verbs

- Certain NP's measure out the event. They are direct objects consumed or created in increments over time (cf. *eat an apple* vs. *push a chart*) (Tenny 1994).
- In Mary drank a glass of wine "every part of the glass of wine being drunk corresponds to a part of the drinking event" (Krifka 1992)

### Incremental Theme Verbs

- Certain NP's measure out the event. They are direct objects consumed or created in increments over time (cf. *eat an apple* vs. *push a chart*) (Tenny 1994).
- In Mary drank a glass of wine "every part of the glass of wine being drunk corresponds to a part of the drinking event" (Krifka 1992)
- "Incremental themes are arguments that are completely processed only upon termination of the event, i.e., at its end point" (Dowty 1991).

 Verbs with variable aspectual behavior: they seems to be change of state verbs like other achievements, but allow durational adverbs (Dowty 1979, Hay, Kennedy and Levin 1999, Rappaport Hovav 2008).

- Verbs with variable aspectual behavior: they seems to be change of state verbs like other achievements, but allow durational adverbs (Dowty 1979, Hay, Kennedy and Levin 1999, Rappaport Hovav 2008).
- No implication that exactly the same change of state took place over and over again (no semelfactives).

- Verbs with variable aspectual behavior: they seems to be change of state verbs like other achievements, but allow durational adverbs (Dowty 1979, Hay, Kennedy and Levin 1999, Rappaport Hovav 2008).
- No implication that exactly the same change of state took place over and over again (no semelfactives).
- Scalar predicates: verbs which lexically specify a change along a scale inasmuch as they denote an ordered set of values for a property of an event argument (Hay, Kennedy and Levin 1999, Rappaport Hovav 2008).

- No implication that exactly the same change of state took place over and over again (no semelfactives).
- Scalar predicates: verbs which lexically specify a change along a scale inasmuch as they denote an ordered set of values for a property of an event argument (Hay, Kennedy and Levin 1999, Rappaport Hovav 2008).
- For example *cool*, *age*, *lenghten*, *shorten*; *descend*.
- Let the soup <u>cool</u> for 10 minutes.
- I went on working until the soup <u>cooled</u>.

◆□▶ ◆□▶ ◆ ■▶ ◆ ■ → ○ ○ 13/78

#### Points

Moens and Steedman 1988 analyze point expressions as those that are not normally associated to a consequent state (consequent state defined as no transition to a new state in the world – according to Moens and Steedman a point is an event whose consequences are not at issue in the discourse).
### Points

- Moens and Steedman 1988 analyze point expressions as those that are not normally associated to a consequent state (consequent state defined as no transition to a new state in the world – according to Moens and Steedman a point is an event whose consequences are not at issue in the discourse).
- Semelfactives (Smith 1990, Rothstein 2004).

### Points

- Moens and Steedman 1988 analyze point expressions as those that are not normally associated to a consequent state (consequent state defined as no transition to a new state in the world – according to Moens and Steedman a point is an event whose consequences are not at issue in the discourse).
- Semelfactives (Smith 1990, Rothstein 2004).
- \*arrived/landed for five minutes, knocked/tapped for five minutes.

### Points

- Moens and Steedman 1988 analyze point expressions as those that are not normally associated to a consequent state (consequent state defined as no transition to a new state in the world – according to Moens and Steedman a point is an event whose consequences are not at issue in the discourse).
- Semelfactives (Smith 1990, Rothstein 2004).
- \*arrived/landed for five minutes, knocked/tapped for five minutes.
- Points admit iterative readings under coercive contexts (Moens and Steedman 1988).

 Bare plurals and mass-terms arguments can make a sentence with a telic predicate behave as if it were 'durative' or 'imperfective' in aspect (Verkuyl 1972).

- Bare plurals and mass-terms arguments can make a sentence with a telic predicate behave as if it were 'durative' or 'imperfective' in aspect (Verkuyl 1972).
- John drank a glass of beer (perfective).

- Bare plurals and mass-terms arguments can make a sentence with a telic predicate behave as if it were 'durative' or 'imperfective' in aspect (Verkuyl 1972).
- John drank a glass of beer (perfective).
- John drank beer (imperfective).

We assume that a *state* is defined as a single frame structure (event), containing a proposition, where the frame is temporally indexed, i.e.,  $e^i \rightarrow \phi$  is interpreted as  $\phi$  holding as true at time *i*. The frame-based representation from Pustejovsky and Moszkowicz (2011) can be given as follows:

シマペ 27/78

<ロト < 回 > < 臣 > < 臣 > 臣 の < で 28/78

Propositions can be evaluated over subsequent states, of course, so we need an operation of concatenation, +, which applies to two or more event frames, as illustrated below.

<□ ▶ < □ ▶ < 三 ▶ < 三 ▶ < 三 ● ○ < 28/78

(43)

## Change and Directed Motion

- Manner-of-motion verbs introduce an assignment of a location value: loc(x) := y; y := z
- Directed motion introduces a dimension that is measured against:
   d(b,y) < d(b,z)</li>

<□ ▶ < □ ▶ < 三 ▶ < 三 ▶ < 三 ◆ ○ < 53/78

## Change and Directed Motion

 Manner-of-motion verbs introduce an assignment of a location value:

 $loc(x) \coloneqq y; y \coloneqq z$ 

Directed motion introduces a dimension that is measured against:

d(b,y) < d(b,z)

Path verbs introduce a pair of tests: ¬\$\phi\$? ... \$\phi\$?
DITL

<ロト < 団 > < 臣 > < 臣 > 臣 の < で 54/78

The execution of a change in the value to an attribute A for an object x leaves a trail, τ.

- The execution of a change in the value to an attribute A for an object x leaves a trail, \(\tau\).
- For motion, this trail is the created object of the path p which the mover travels on;

- The execution of a change in the value to an attribute A for an object x leaves a trail, τ.
- For motion, this trail is the created object of the path p which the mover travels on;
- For creation predicates, this trail is the created object brought about by order-preserving transformations as executed in the directed process above.

# (123) MOTION LEAVING A TRAIL: a. Assign a value, y, to the location of the moving object, x. loc(x) := y

#### (124) MOTION LEAVING A TRAIL:

- a. Assign a value, y, to the location of the moving object, x.  $loc(x) \coloneqq y$
- b. Name this value b (this will be the beginning of the movement);

b := y

(125) MOTION LEAVING A TRAIL:

- Assign a value, y, to the location of the moving object, x.
   loc(x) := y
- b. Name this value b (this will be the beginning of the movement);

b := yc. Initiate a path p that is a list, starting at b; p := (b)

(126) MOTION LEAVING A TRAIL:

- Assign a value, y, to the location of the moving object, x.
   loc(x) := y
- b. Name this value b (this will be the beginning of the movement);

b := y

c. Initiate a path p that is a list, starting at b;

 $p \coloneqq (b)$ 

d. Then, reassign the value of y to z, where  $y \neq z$ 

$$y \coloneqq z, y \neq z$$

(127) MOTION LEAVING A TRAIL:

- Assign a value, y, to the location of the moving object, x.
   loc(x) := y
- b. Name this value b (this will be the beginning of the movement);

b := y

c. Initiate a path p that is a list, starting at b;

 $p \coloneqq (b)$ 

d. Then, reassign the value of y to z, where  $y \neq z$ 

$$y \coloneqq z, y \neq z$$

e. Add the reassigned value of y to path p;

(128) MOTION LEAVING A TRAIL:

- Assign a value, y, to the location of the moving object, x.
   loc(x) := y
- b. Name this value b (this will be the beginning of the movement);

*b* := *y* 

c. Initiate a path p that is a list, starting at b;

 $p \coloneqq (b)$ 

d. Then, reassign the value of y to z, where  $y \neq z$ 

$$y \coloneqq z, y \neq z$$

e. Add the reassigned value of y to path p;

 $p \coloneqq (p, z)$ 

f. Kleene iterate steps (d) and (e).

## Generalizing the Path Metaphor

 We generalize the Path Metaphor to the analysis of the creation predicates.

# Generalizing the Path Metaphor

- We generalize the Path Metaphor to the analysis of the creation predicates.
- We analyze creation predicates as predicates referencing two types of scales.

# Type of Creation Verbs

(132) a. John wrote a letter.

# Type of Creation Verbs

(134) a. John wrote a letter.b. Sophie wrote for hours.

# Type of Creation Verbs

- (136) a. John wrote a letter.
  - b. Sophie wrote for hours.
  - c. Sophie wrote for an hour.

(137) a. John built a wooden bookcase.b. \*John built for weeks.

58/78

Some verbs expressing change are associated with a scale while others are not (scalar vs. non-scalar change).

◆□ ▶ ◆ □ ▶ ◆ ■ ▶ ◆ ■ ◆ ○ € ◆ ○ € 59/78

- Some verbs expressing change are associated with a scale while others are not (scalar vs. non-scalar change).
- There is a single scale domain (ordinal scale), which varies with respect to mereological complexity (two-point vs. multi-point) and specificity of the end point (bounded vs. unbounded).

va (~ 59/78

- Some verbs expressing change are associated with a scale while others are not (scalar vs. non-scalar change).
- There is a single scale domain (ordinal scale), which varies with respect to mereological complexity (two-point vs. multi-point) and specificity of the end point (bounded vs. unbounded).
- Scales are classified on the basis of the attribute being measured:

シペペ 59/78

# Dynamic Event Structure

## Parallel Scales define an Accomplishment

## Lab on identification of event type properties in corpora

- Choose three target verbs. State your hypothesis regarding the event type associated with the verbs wrt to the extended in time vs instantaneous dimension.
- Count the co-occurrences of the verbs in the raws of the matrix with the expressions in the columns in the BNC using the SkE.
- You can use the context search setting the window, or refine your search with CQL or Word Sketches.

◆□▶ ◆□▶ ◆ ≧▶ ◆ ≧▶ 差 の � で 76/78

# Lab on detection of event type properties in corpora

For the "for x time" expressions, you can use the following regular expression:

```
[lemma = " for" ][]{0,1}[lemma =
```

"instant|second|minute|hour|day|week|month|year"]

 Fill the cooccurrence counts in last column of the matrix and rank the verbs accordingly.

DITI

◆□▶ ◆□▶ ◆ ≧▶ ◆ ≧▶ 差 の � で 77/78

- Select 1 concordance for each verb which constitutes an example of event-type shiftings in context.
- Summarize your results.
